I'm a fullstack software engineer with a special taste for modern JavaScript, with 3 years experience and 10+ years of personal experience. I work mainly with Node.js and React. I love GraphQL and JavaScript typings. I'm strongly committed to the open-source community.

Highlights

I developed the first version of the mobile application on iOS and Android for Spendesk with React-Native, GraphQL and Relay in under 3 months. The choice of React-Native was tough because it was still a relatively new technology at the time, but the promise to deliver on both platforms at once was very appealing. I drove the UX/UI development of the application.

🔗 <https://play.google.com/store/apps/details?id=com.spendesk.spendesk>

I have been coding in JavaScript for 8 years. When Node.js started to become popular, I was coding in PHP and switched for the promise of easy real-time applications with socket.io. I loved the ecosystem and the ease of coding. From there I was part of the JavaScript wave: React in 2014, then Flux and more precisely Redux. I moved on to using GraphQL and have been active in the open-source community helping others to understand the technology:

I successfully worked as a freelancer in 2018. I wanted more flexibility to allow myself to travel. I worked with Habx on 2 separate contracts of 1 month and 2 months, and got to travel in South America. I was employed permanently by Habx in September.

Work History

Fullstack JavaScript developer at habx.fr 🔗

Sep. 18 - Present: employee

Feb 18: Freelancer, Apr - Jun 18: Freelancer

- Using React, Node, GraphQL, Apollo, Webpack, AWS, MongoDB, PostGres, TypeScript
- Main platform and custom CRM development
- Ownership of various features: landing pages (99/100 PageSpeed, display < 100ms), real estate prices crawling, SQS utils library, third-party integrations

Traveling in Chile and in Colombia

March 18, then June 18 - August 18

Front-end JavaScript developer at [Dailymotion](#)

August 17 - December 17

- Using React, Redux, Webpack. Worked in collaboration with 4 other front-end developers, in a team of 20 people.

Fullstack JavaScript developer at [Spendesk](#)

October 16 - August 17

- Inclusion in technical choices. Shipping new features on web application, including server and client-side. Using React, Redux and Node.js.
